

SITUATED WITHIN THE PLAZA OFFICES WEST AT THE CANBERRA AIRPORT TERMINAL IS THE NEW HEAD OFFICE FOR THE CAPITAL AIRPORT GROUP

A high-quality space designed to encourage collaboration and to drive quality outcomes.

Director of Projects, Zarko Danilov approached Delta Building Automation to assist with the energy efficiency and reporting elements of the space. In particular, Zarko was very keen to provide an energy dashboard that would keep the users of the space up to date on how much energy they were using and provide examples of how efficiencies could be made to reduce energy consumption.

The solution provided by Delta Building Automation was the Earthright Energy Dashboard. Without any prior knowledge, all tenants can now see in real-time how well the building is conserving energy, and show the world at the same time. This is achieved all through the simple and concise Earthright Energy Dashboard provided by Delta Controls.

CONSUMPTION AND CONSERVATION, SAVINGS AND SUSTAINABILITY

The Earthright Energy Dashboard charts and gauges reflect the building's real-time energy consumption and conservation, energy savings and commitment to sustainability. Information is presented in an attractive, easy to understand series of displays – or dashboards – highlighting water, electricity or natural gas consumption. Whether via kiosk, internet or building lobby display, the Earthright Energy Dashboard graphically compares energy consumption from year to year, displays current weather conditions and forecasts, highlights conservation efforts, reveals energy-saving tips and more.

Further, the building's green features can also be showcased to educate tenants and encourage overall energy responsibility.

In this case, the Capital Airport Group demonstrates a real commitment to sustainability, encouraging visitors to their premises to do the same.

"The Capital Airport Group strives to be an outstanding corporate citizen and we identified our responsibility to the environment across all our properties many years ago.

We are delighted with the installation of the Earthright Energy Dashboard and ongoing assistance we receive from Delta Building Automation with our Airport office, and airport terminal.

The team of experts at Delta Building Automation provide us with the tools to manage our own environment and achieve the efficiencies we desired. They are also on hand to assist with any questions, servicing or testing when we need them."
